NOTES.

Relief to British Subjects resident in the United Kingdom.

Where a British subject resident in the United Kingdom has income derived from Ceylon, he is entitled to special relief which operates up to a limit of approximately £5,000 total income.

The relief reduces the tax to the fraction $\frac{\text{Ceylon income}}{\text{Total income}}$ of the amount which would be payable if the individual concerned were resident in Ceylon and liable to Ceylon tax on his total income.

Double Tax Relief.

Provision is made for relief in Ceylon where the same income is subject to—

(*a*) United Kingdom tax and Ceylon tax, or
(*b*) Empire tax and Ceylon tax.

Empire tax is defined as being tax imposed in any other part of the Empire which grants double tax relief in respect of the payment of Ceylon tax.

The relief in respect of United Kingdon tax is the amount by which the Ceylon rate of tax exceeds half the United Kingdom rate, with a proviso that the relief shall not exceed half the Ceylon tax.

The relief in respect of Empire tax is half the smaller tax on the income doubly charged.

Husband and Wife.

The income of a married woman who is not separated from her husband is treated as the husband's income.

Deduction of Tax at Source.

Tax is deducted at 10 per cent. from all dividends paid by Ceylon Companies and from interest, rents, and annuities paid by persons in Ceylon to persons out of Ceylon.

b Based on the results of the partial Census of Production, 1929.
c Based on the returns furnished by the Revenue Officers for 1933.
d Based on an estimate of the Department of Agriculture: according to the partial Census of Production, 1929, the acreage was about 800,000, while according to the returns furnished by Government Agents to the Paddy Commission the extent under cultivation in 1930 amounted to 941,000 acres.
e Based on the Rubber Controller's Census of 1928, perhaps overstated. Owing to the slump in prices, possibly 50 per cent. of the acreage was not tapped.
f Based on various estimates. The partial Census of Production, 1929, showed about 450,000 but excluded small holdings.

N.B.—The figures for the provinces and districts are omitted as they are not considered sufficiently accurate for publication. The totals shown above are in several cases of doubtful accuracy.

V.—MANUFACTURES, MINES, AND FISHERIES FOR 1933.

N.B.—There are few regular manufactories, mills, &c., in Ceylon, those entered in this return being, with the exception of the steam engines and a few of the oil mills, of a very simple kind. There is also no regular yard for shipbuilding in the Island ; small sloops and schooners are, however, frequently built and launched locally.

LABOUR, WAGES, AND COST OF FOODSTUFFS, &c.

I.—LABOUR.

1. *Actual Wages.*

The Department of Labour has not yet attempted to conduct an inquiry into current wage rates or earnings in Ceylon, and has little reliable information on the subject (except in respect of Indian labour on estates).

2. *Tea, rubber, coconut products.*

(*a*) *On lands of which ten acres or more are actually cultivated.*

(i.) *Statutory minimum rates of wages.*

(A) *Imported Indian unskilled agricultural labour.*—Employers are under a statutory obligation to pay wages at rates not less favourable to the labourer than the following, for a day of nine hours, including time not exceeding one hour taken for the midday meal :—

(Subject to alteration.)

	Men. Cents.	Women. Cents.	Children. Cents.
Low-country	35 ..	28 ..	20
Mid-country	37 ..	30 ..	21
Up-country	41 ..	33 ..	25

The above rates, although only legal minima, tend to become standard rates for labourers of average capacity. Industrious pluckers in tea fields and industrious rubber tappers can, however, earn wages at higher rates.

Employers are also under a statutory obligation to provide their labourers with not less than six days' work in the week. In practice, labourers of this class do not as a rule turn out for work six days in every week.

(B) *Other labour.*—No statutory requirements.

(ii.) *Overtime.*

(A) Imported Indian unskilled agricultural labour.—Overtime must be paid at not less per hour than one-eighth of the legal minimum daily rate applicable.

(B) *Other labour.*—No statutory requirements.

(iii.) *Supplementary payments, &c.*

(A) *Free housing.*—Always given, by custom, to all classes of labour.

(B) *Free medical attention.—Tea and rubber estates*—All classes of labour. Superintendent of estate must, by law,—

(1) inform himself of all cases of sickness on his estate, and take such steps as he may deem best for the immediate relief of the sick, and

(2) send any labourer to hospital when so required by a medical officer.

As regards coconut estates, please see (*b*) below.

(C) *Maternity benefits.*—All classes of labour, on *tea and rubber estates*—Superintendent of the estate must by law,—

supply at the cost of the estate every female labourer resident upon the estate, and giving birth thereon to a child, with sufficient food and lodging for one month after the birth of such child.

(D) *Free rice.*—In the case of *imported Indian unskilled agricultural labour only* there is an understanding with the Government of India that every employer will issue rice free of cost at the rate of one-eighth of a bushel per month to each working man and to each widow employed who has one or more non-working children, or in the alternative will provide one meal daily for every Indian child under ten years of age resident upon the estate.

This arrangement is accepted by nearly all tea and rubber estates. It is doubtful whether it is observed to any considerable extent on coconut estates.

(iv.) *Deductions from wages.*

(A) *Imported Indian unskilled agricultural labour.*—The only deductions which may lawfully be made from wages are deductions on account of advances of money made in anticipation of wages and deductions on account of food, clothes and other articles supplied, which the employer is not liable in law to supply at his own expense.

(B) *Other labour.*—No statutory restrictions.

(*b*) *Other lands.*—Indian and indigenous labour—No statutory requirements or restrictions relating to wages.

XII.—RELIGIOUS SERVICES.

There are no Prison Chaplains, but accredited ministers, lay preachers, and social workers of all persuasions are admitted on application.

At Welikada, Bogambara, and other principal prisons frequent services are held both by Protestant and Roman Catholic ministers on Sundays; and religious instruction is also given by catechists of various denominations regularly. At other prisons such services are held whenever any minister expresses a wish to do so. Religious services are also held by Buddhist, Hindu, and Muslim priests in most of the prisons.

Roman Catholic priests and Dissenting ministers are allowed free access to prisoners of their own persuasion, but are not informed when any such prisoners enter the prison, unless at the express wish of a prisoner.

XIII.—REMISSIONS OF IMPRISONMENT.

XV.—SEPARATION SYSTEM.

All the penal stage prisoners of the Island, if sentenced to over a month, are passed through one of the following prisons:—Welikada, Kandy, Jaffna, Anuradhapura, Galle, Batticaloa, Badulla, and Mahara.

In these prisons the penal stage prisoners are worked on the separate system as far as can be arranged.

METEOROLOGY.

General Remarks.—There is a marked variation in climate between the different parts of Ceylon. In the low-country, with a mean temperature of the order of 80°F., a noticeable feature is the small range of both temperature and pressure. There is, however, wide divergence between the moist conditions in the south-west of the Island, where the average annual rainfall varies from 100 to over 200 inches, and the dry zone areas of the north, north-west, and south-east, where several stations have annual averages of less than 40 inches.

Inland, with altitudes up to over 8,000 feet, a cooler climate is experienced, with a corresponding change in vegetation and an increased range of temperature.

Rainfall.—The chief features of the year were the exceptionally heavy north-east monsoon rains of January, and unusually heavy south-west monsoon rains in May, which were mainly responsible for a south-west monsoon rainfall appreciably above the average.

The rainfall totals for the year were generally above average, except in the north of the Island, and at a few stations along the west coast. The highest totals recorded were 309·96 inches at Padupola and 300·04 inches at Kenilworth. Other stations reporting over 250 inches were Watawala, Carney, Hendon, Upper St. Martin's, Blackwater, and Theydon Bois. The greatest excess above average was at Hendon, over 101 inches. Other excesses over 80 inches were recorded at Patiagama, Padupola, Upper St. Martin's, Kabaragalla, and New Forest. The highest averages (10 years and over) are Ingoya, 232·11 inches, and Carney, 229·54 inches. Other yearly averages over 200 are at Blackwater, Kenilworth, Watawala, Padupola, and Maliboda. In January, there were recorded monthly totals of 123·09 inches at Upper St. Martin's, and 122·20 inches at Hendon. These are the highest monthly totals on record for any Ceylon station.

The lowest totals for the year were 33·76 inches, at Battulu-oya, 35·31 inches, at Kankesanturai, and 36·34 inches, at Yala, while the stations with greatest deficits were Denagama, 25·42 inches, Battulu-oya, 19·36 inches, and Kebitigollewa, 18·43 inches. The lowest rainfall averages are Marichchukkadi, 35·55 inches, Yala, 37·54 inches, and Mannar Waterworks, 38·46 inches.

Temperature.—The low-country stations with the highest and lowest mean shade temperatures for 1933 were Mannar, with 81·4°F., and Galle, with 79·3°F. The figures for Colombo and Kandy were 79·8°F., and 75.8°F., respectively, while Nuwara Eliya, at an elevation of over 6,000 feet, had a mean shade temperature of 59·2°F. The highest shade temperature recorded during the year was 96·8°F., at Batticaloa, on June 17 and August 4, while the highest on record is 103·7°., at Trincomalee, on May 12, 1890. The lowest temperature this year at low-country stations was 63·3° F., at Kurunegala, on December 28, while 31·6°F. was recorded at Nuwara Eliya on February 17, at which station 27·1°F. was recorded on February 8, 1914. The highest shade temperature in Colombo in 1933 was 90·5°F., on April 29, and the lowest 65·7°F., on December 28. The mean daily range for 1933 (the difference between the mean of the maxima and the mean of the minima) was greatest at Badulla, 15·8°F., and Nuwara Eliya, 15·5°F., and lowest at Galle, 8·6°F. The absolute range for the year (the difference between the highest and the lowest readings recorded at any one station) was greatest at Nuwara Eliya, 43·3°F., and lowest at Galle, 20·2°F.

TABLE VIII.—Average Percentage Humidity from Dry and Wet-bulb readings at 9.30 A.M. and 3.30 P.M together with the offsets of the 1933 Values from these Averages.

The averages are taken from observed values, whether shed or screen. Errors caused by the imperfections of the shed exposures are too small to justify the deletion of shed values as yet.

TABLE IX.—Average Percentage Humidity from the Minimum readings of the dry- and wet-bulb thermometers, together with the offsets of the 1933 values from these averages. These minima do not necessarily occur at the same instant, and a consequent uncertainty is introduced. The evidence of thermographs shows that this uncertainty is very small, and the publication of this table seems desirable owing to the fact that the humidity at night differs considerably from that by day, and hence table VIII. alone gives a very incomplete statement of conditions as a whole.

TABLE XI.—Offsets of the 9·30 and 15·30 Air Pressure Readings of the Year 1933, from the Average, expressed in decimals of an inch of mercury.

Taking one millibar as roughly equal to 0·03 inch of mercury, it will be seen that there are comparatively few offsets of as much as a millibar.

For 11 days in November the Little Basses anemometer was moved to another position.

TABLE XIII.—Percentage of Wind Directions in 1933. Average values of frequencies are not given in this Report owing to the exigencies of space, but can be seen in the 1926 Report. Observations are made to sixteen points, but are summarized here in terms of eight points only.

It will be noticed that in some cases these percentages do not add up exactly to 100. This is because each percentage is taken to the nearest unit only, and it may happen that the approximations are mostly upwards or mostly downwards.

Table XIV.—High velocities of wind at Colombo (Pilot Station). A Dines pressure anemometer is in use at the Pilot Station, on the south-west breakwater of the Harbour. The height of the vane is 15 feet above the dome of the roof of the station, and about 80 feet above the surface of the water.

Data from this instrument are tabulated as follows :—The day is divided into two-hourly intervals, centred at the odd hours, and all such intervals, during the year, in which the wind, in any part of the interval, reached a value of 30 miles per hour or over, are indicated in the table by the date, and the general direction of the heaviest gusts. When the wind reached the "gale" line (38 miles per hour or over) the date and wind direction are shown in italics, and cases in which the high wind was accompanied by a sharp change in direction are denoted by a (*).

The highest velocity recorded during each month, with date and time, is shown in the last column.

The anemometer was out of action occasionally for short intervals, but comparison with charts from another instrument in the Fort indicates that loss of data from this cause is inappreciable.

The times given are in Ceylon standard time, 5½ hours ahead of Greenwich.

TABLE XV.—Maximum amount of rain falling in any periods of 1, 2, 3, 4, &c., consecutive days, during the year 1933, for selected stations. The period of consecutive days are given between 10 and 20 by steps of 2, between 20 and 32 by steps of 3, between 32 and 40 by steps of 4, and above 40 by steps of 5.

The figure under each number represents the maximum amount of rain falling on that number of consecutive days during the year, the different figures for each station not necessarily referring to the same wet spell. For example, at Ratnapura the highest fall on any 3 consecutive days was 8·95 inches, in October, while the highest fall on any 4 consecutive days was 9·71 inches, in May.

The series is terminated for each station when the intensity of the rain finally falls below 2 inches per day. In the case of wet spells commencing towards the end of one calender year and lasting into the next, the total rainfall in any particular group of consecutive days is considered as belonging to that year in which the greater part of the rain fell. The only case of that kind this year was supplied by St. Martin's.

The rainfall day is not the calendar day, but from the observation of one morning to that of the following morning (even in the case of stations at which pluviograph records are available), and the rainfall year ends with the morning observation of January 1, 1934.

TABLE XVIII.—Highest Intensities of Rainfall recorded in 1933.

These are expressed by giving for each month the shortest times in minutes taken for the precipitation of 0·4, 0·8, 1·2, &c., inches of rain.

The figures in brackets give the number of separate rainstorms in each month in which the amount of rain specified at the head of the column fell at a rate of at least one inch per hour. Where no figure is given in brackets the figure 1 may be understood.

[1] The pluviograph at Labugama did not function very satisfactorily during the year, frequently going out of order, particularly in January and February. The figures for this station may be appreciably affected by these omissions.

[2] The Chilaw pluviograph was out of order during the latter part of a heavy fall in August. This may affect the figures for that month, but is unlikely to affect the maxima for the year to any extent.

[3] The Tabbowa instrument was out of order during a fall of 0·74 inch in November. This is unlikely to affect the figures for that month or the year.

[4] The Ridiyagama instrument was out of order during a fall of 2·43 inches in May.

[5] Records of a few heavy falls at Watawala were lost during the year, but the number was not great.

TABLE XIX.—Incidence of Drought at Selected Stations.

The definitions adopted are those used in " British Rainfall," the rainfall annual of the British Meteorological Office. They are as follows :—

Absolute Drought.—Any period of 15 days or more in which no rain is recorded.

Partial Drought.—Any period of 29 days or more over which the mean daily rainfall does not exceed ·01 inch per day, *e.g.*, a total fall of 0·37 inch or less in 37 days would qualify that period as a partial drought.

Dry Spell.—Any period of 15 days or more in which the rainfall on no day exceeds ·03 inch.

In practice it will generally be found that most of the days of a dry spell are rainless days.

All *absolute droughts*, *partial droughts*, and *dry spells* occurring during the year at certain selected stations are shown in the table. (In the case of a drought beginning in one year and ending in the next, it is credited to the year that contains the longer part of the drought.) In addition, a *day of drought* has been defined as any day included in either, or both, a dry spell and a partial drought, and the total number of *days of drought* comprised within the tabulated droughts has also been tabulated, as an index of the droughtiness of the year at the station concerned. (This number is not necessarily quite the same as the total number of *days of drought* within the calendar year.)

It sometimes happens that a day of appreciable rain occurs at the beginning or end of a partial drought. It is, however, included in the drought if its inclusion does not bring the mean daily rainfall over ·01 inch.

The selected stations are Colombo and all daily reporting stations, the meteorological stations at Ridiyagama and Tabbowa and the rainfall station at Labugama, the observations from which are checked by pulviographs, and the meteorological stations at the Botanical Gardens, Hakgala, and the Research Institute stations of St. Coomb's, Talawakele ; Culloden, Neboda ; and Passara.

† Low water ordinary spring tide.
‡ Even vessels of a larger tonnage can be berthed.

II.—Harbour Facilities.

Colombo Harbour.

There are no enclosed wet docks. Vessels lie at moorings in the shelter of the breakwaters, and are loaded or discharged from lighters.

There are seven berths available during the south-west monsoon and four during the north-east monsoon for vessels drawing up to 33 feet of water; the area being deepened to 36 feet below low water ordinary spring tide, for vessels of 33 feet draught, is being extended. The Port can accommodate 40 vessels in the north-east monsoon, and 42 vessels in the south-west monsoon, excluding accommodation at the Graving Dock Guide Pier and Oil Jetties.

There are three oil jetties and one pier available for shipping as follows :—

Discharge Jetty, where vessels of 500 feet length and 27 feet draught can be berthed.
Outer Bunkering Jetty, where vessels of 500 feet length and 27 feet draught can be berthed.
Inner Bunkering Jetty, for bunkering barges only.
Graving Dock Guide Pier, length 800 feet, at present available for vessels of 29 feet draught for a length of 580 feet and of 27 feet draught for the remainder when not required for docking purposes.

In addition to the Graving Dock, there is a Patent Slip capable of taking vessels up to 1,200 tons dead weight. The Port is equipped with a thoroughly up-to-date Oil Installations Depôt, which is directly connected with the Harbour front by pipe lines. Ships bunker either at the Graving Dock Guide Pier and Oil Jetties or in the stream from barges.

Galle Harbour.

There are seven berths accommodating vessels up to 450 feet in length and 27 feet draught.

Ships are moored head and stern with their own bower anchors and stern moorings supplied by the Harbour authorities.

Cargo is landed by means of lighters at three piers, which have depths of up to 6 feet alongside.

The anchorage is exposed, particularly during the south-west monsoon.

Pilotage is compulsory.

Ships are taken out, but not brought in during the night.

Trincomalee Harbour.

The maximum depth of water available at the Customshouse Jetty ordinary low spring tide is 6 feet 4 inches and of China Bay is 10 feet.

The length of the Customshouse Jetty is 300 feet and that of China Bay is 397 feet
